JD Guided Surgery Kit

Friend of your hand

LET YOUR HAND BE GUIDED BY THE JD GUIDED SURGERY KIT

The ideal solution to perform a minimally invasive surgery with more precision, greater predictability of outcomes and with few simple guided surgery steps.

NEW DESIGN FOR BETTER SURGERY

All JD Guided Drills have a non cylindrical design with two lateral cuts which allows:

- Lower friction in the sleeves so as to avoid overheating
- Better external irrigation during the implant site preparation

PRECISION

GUIDED IMPLANT DEPTH CONTROL

High precision in surgical procedures: implants are placed to the planned depth using a surgical guide and the guided surgery instruments are used in combination with a single sleeve of Ø 5.01mm for a secure implant depth control.

P-FIT SLEEVES

The calibrated inner diameter of the bushing ensures a very precise fit with the body of JDentalCare guided surgery drills, completely eliminating oscillations during the surgical procedure

Note: all measurements in mm
